Modernising Government
March 1999

Policy making:

The process by which governments translate their political vision into programmes and actions to deliver “outcomes” - desired changes in the real world

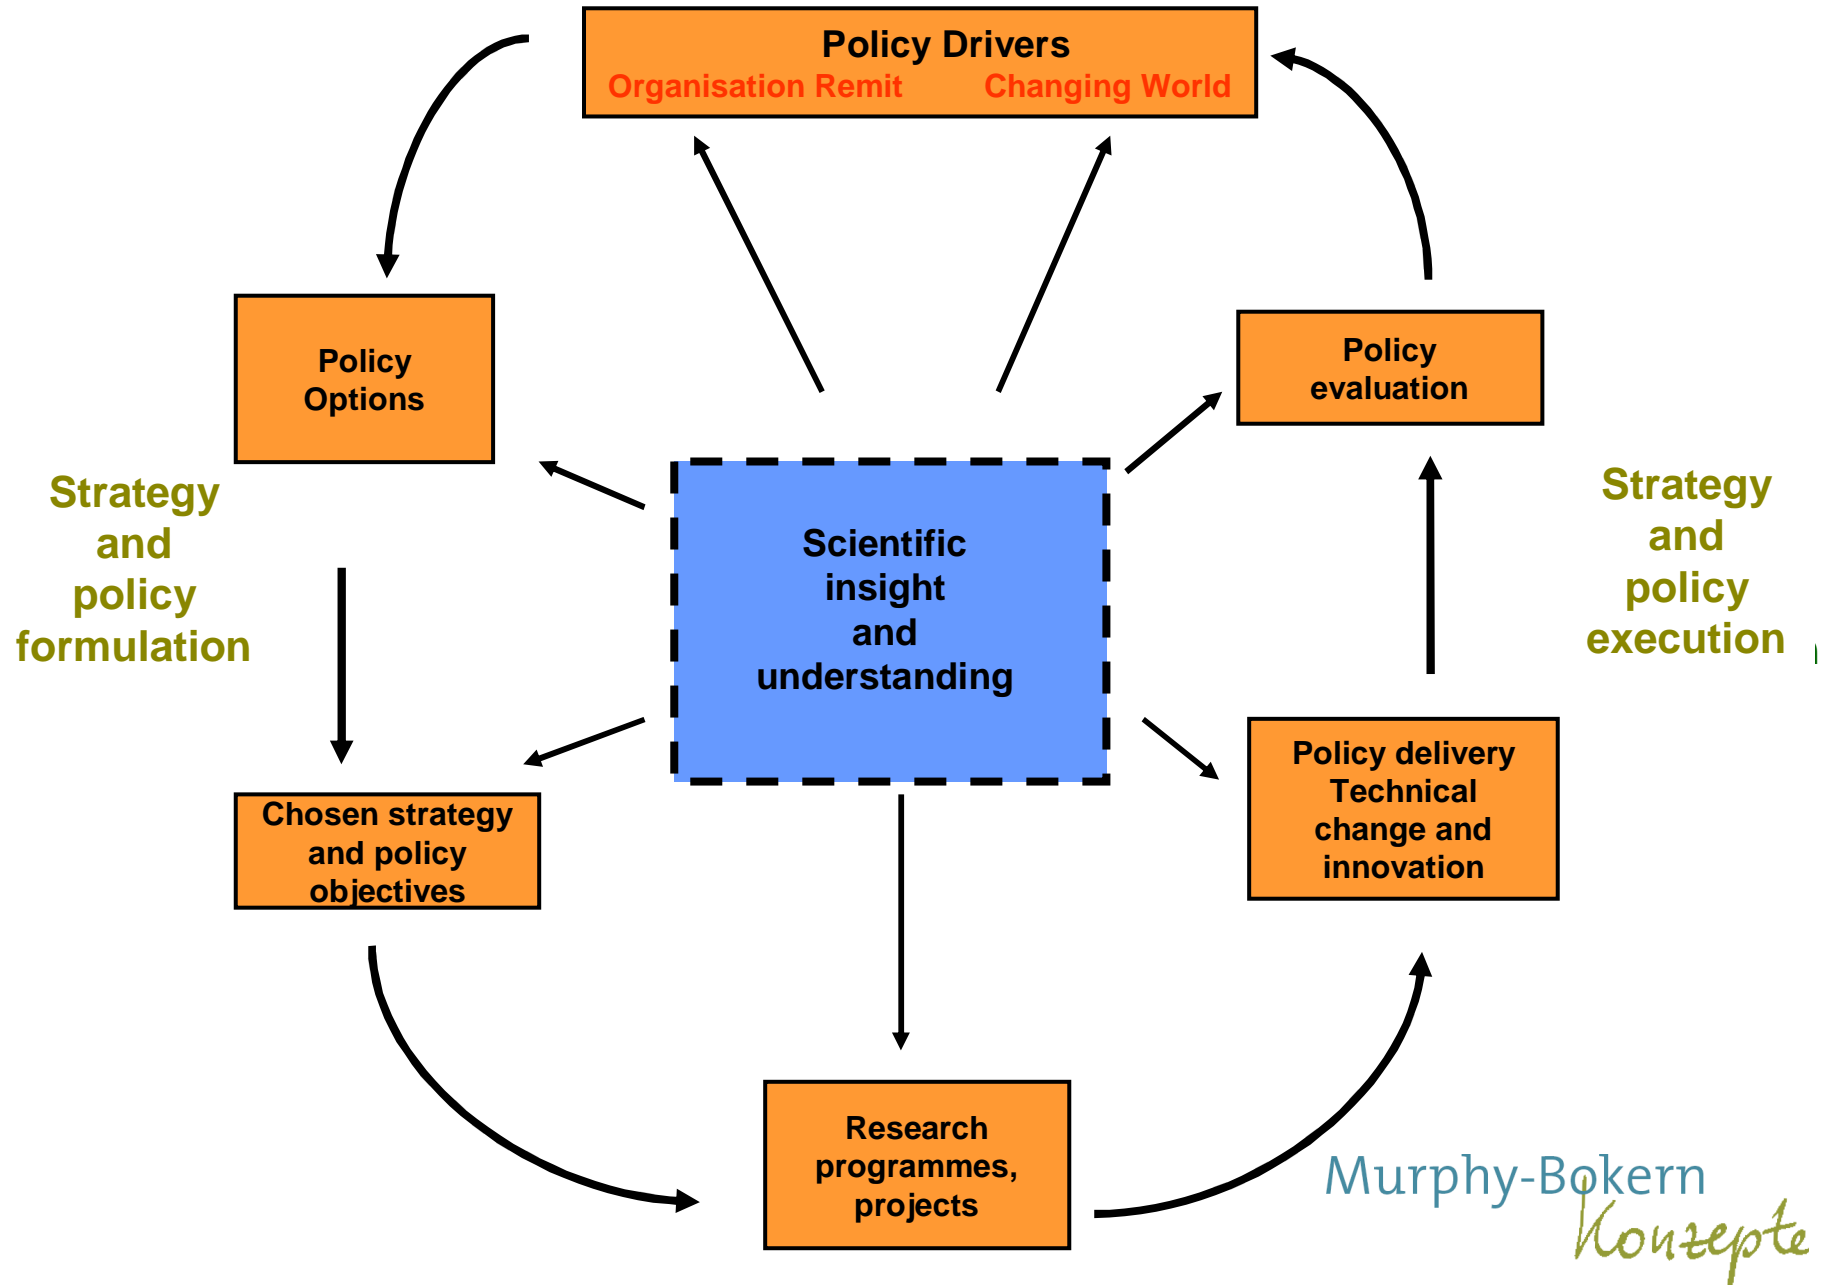

Murphy-Bokern

Konzepte

Science (a policy maker's definition):

The study of how the world works

From research results to policy outcomes: Evidence based policy development and delivery

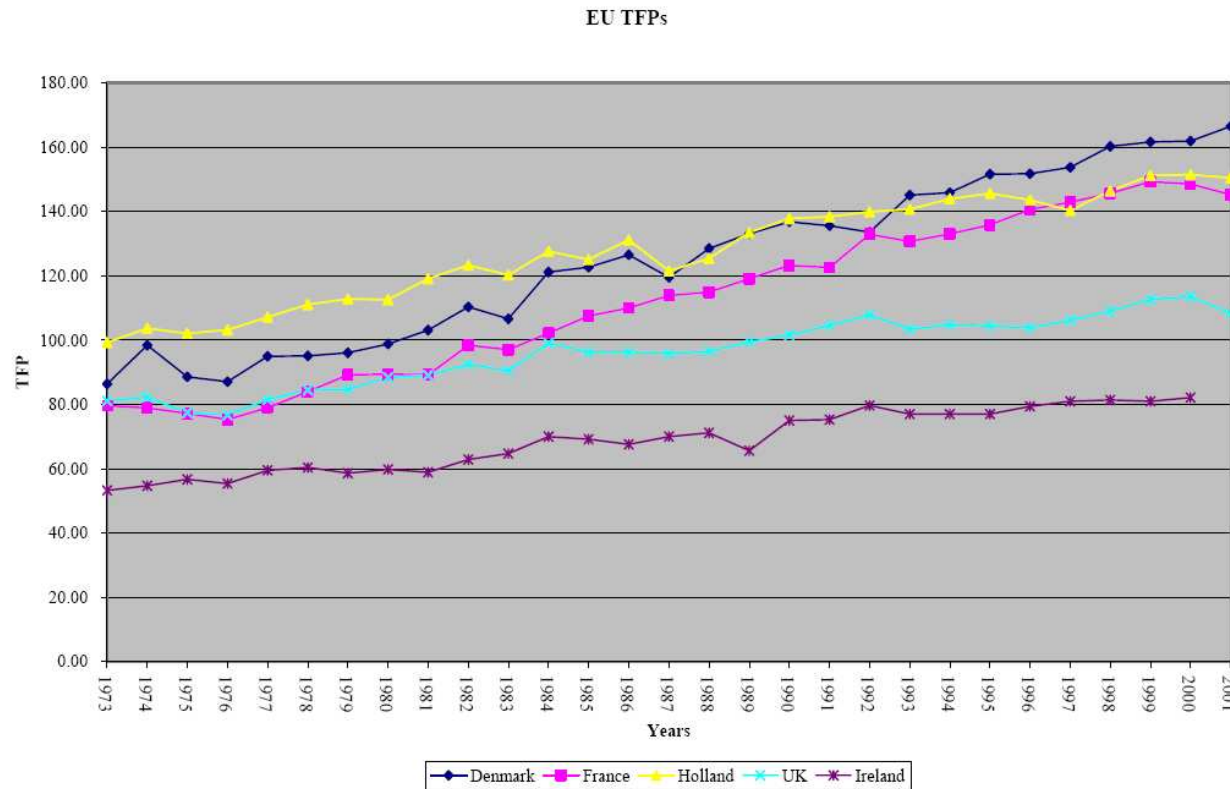

**From research results to policy outcomes:
delivering a return on public investment in research – a UK experience**

Between 1995 and 2005 Defra invested

- ca 200 million Euros in agri-environment research
- ca 300 million Euros in sector facing agricultural research

**Weak bridge to policy outcomes, particularly delivery
through technical change and innovation**

Research investment decisions matter in the long-term: Total Factor Productivity of agriculture in the UK, NL, Fr and Dk.

Explaining the decline in UK agricultural productivity growth.

(Ref: Competitiveness of UK Farming: Measuring and Explaining Productivity Change. AES/Defra Conference, Sustainable Farming and Food. 30 January 2003. Bailey et al., presented by Colin Thirtle.

Konzepte

**From research results to policy outcomes:
delivering a return on public investment in research – words matter**

- **Policy outcomes**
- **Delivering a return**
- **Investment**

The words normally used: ‘funding’, ‘funder’, grants etc. induce a malaise – a lack of focus on returns damaging delivery, toleration of unstable investment and thus the sustainability of the research base

Traditionally, research serving public policy has often been science led under the 'Haldane Principles' laid down by Viscount Haldane in 1918

Advantages

Fosters science and policy opportunities – identifies new hazards and opportunities

Disadvantages

**Poor focus on user needs
Lack of relevance of research outputs
Not responsive to policy change**

Murphy-Bokern
Konzepte

Traditionally, research serving public policy has often been science driven but....

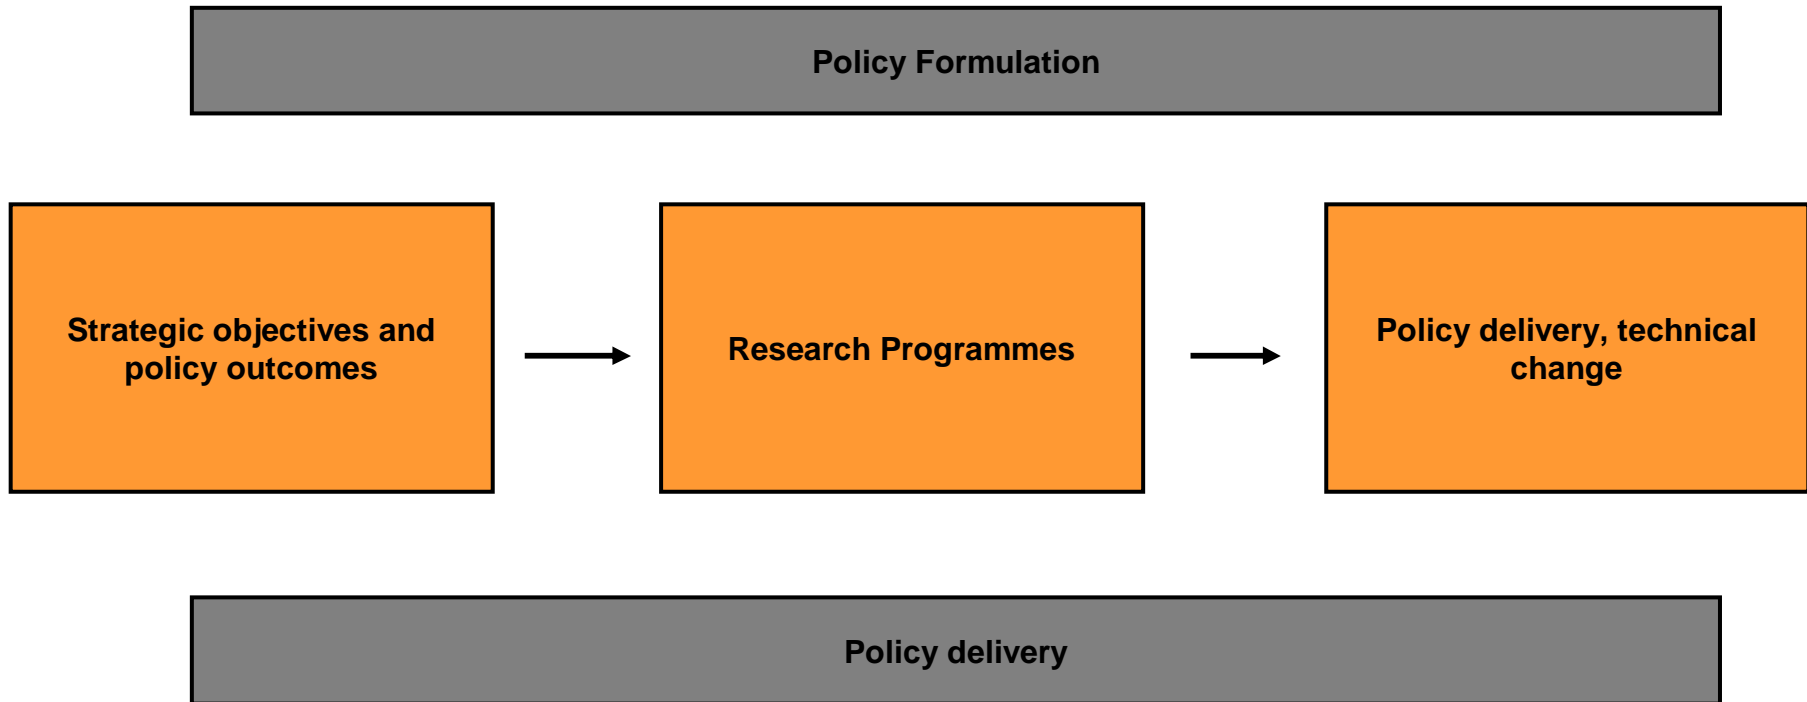

“the country’s needs are not so trivial as to be left to the mercies of a form of scientific roulette”

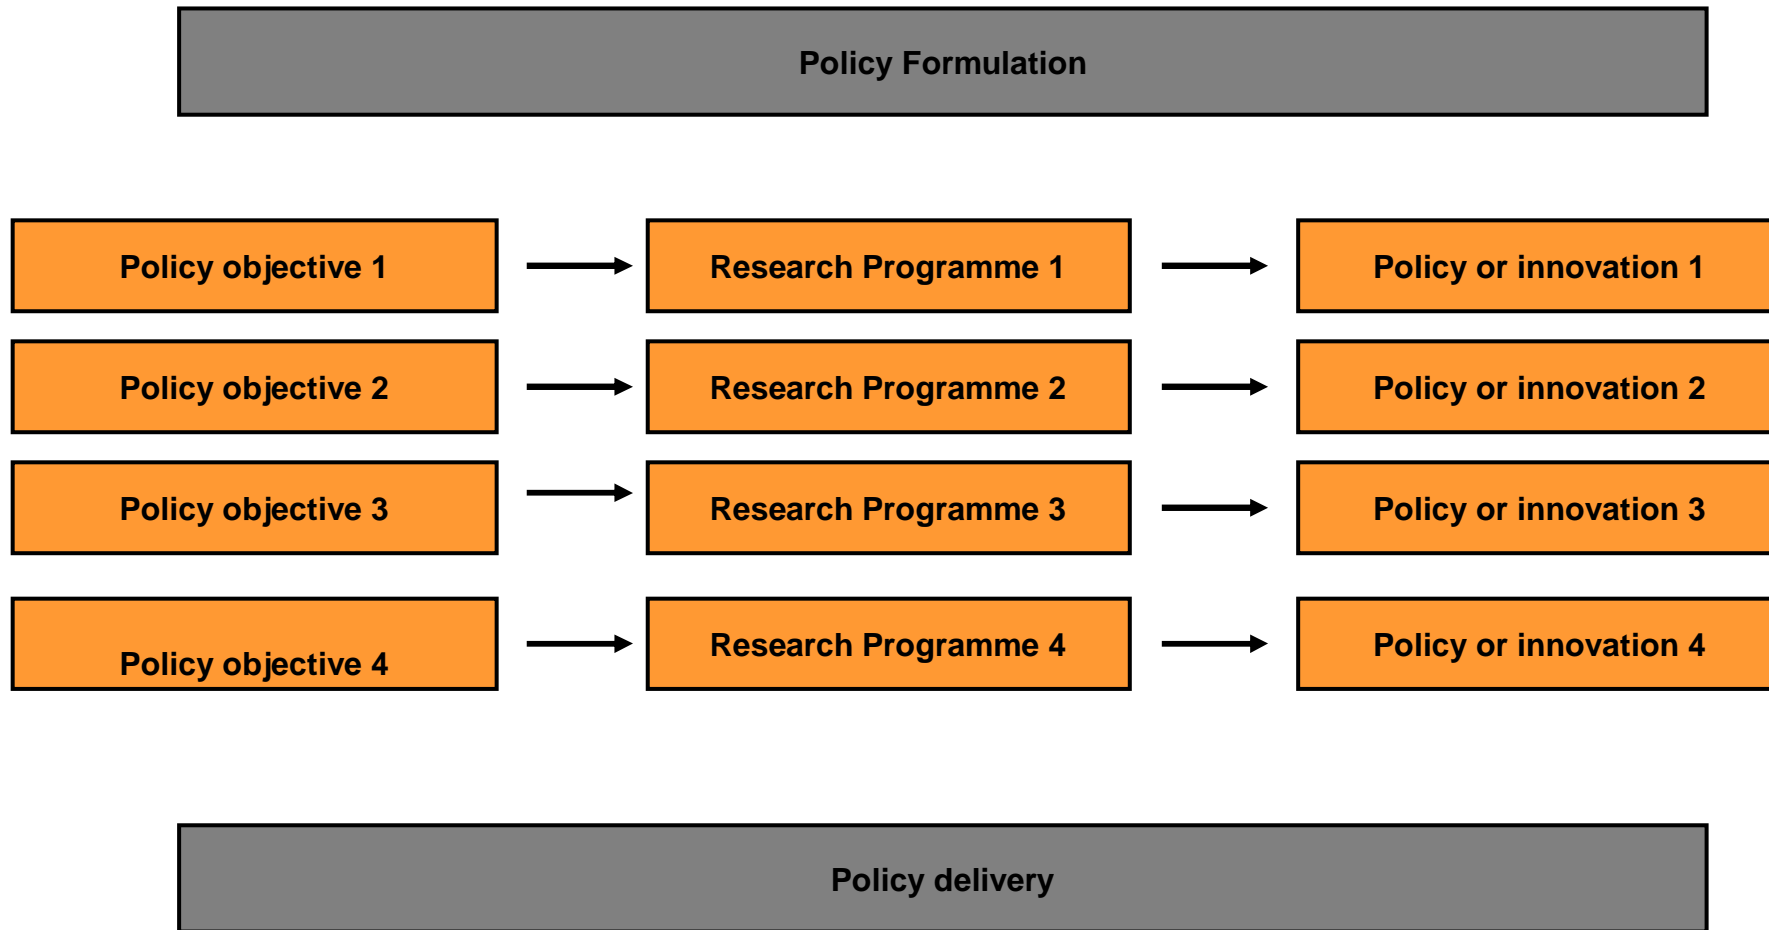

Lord Rothschild, 1972

Murphy-Bokern
Konzepte

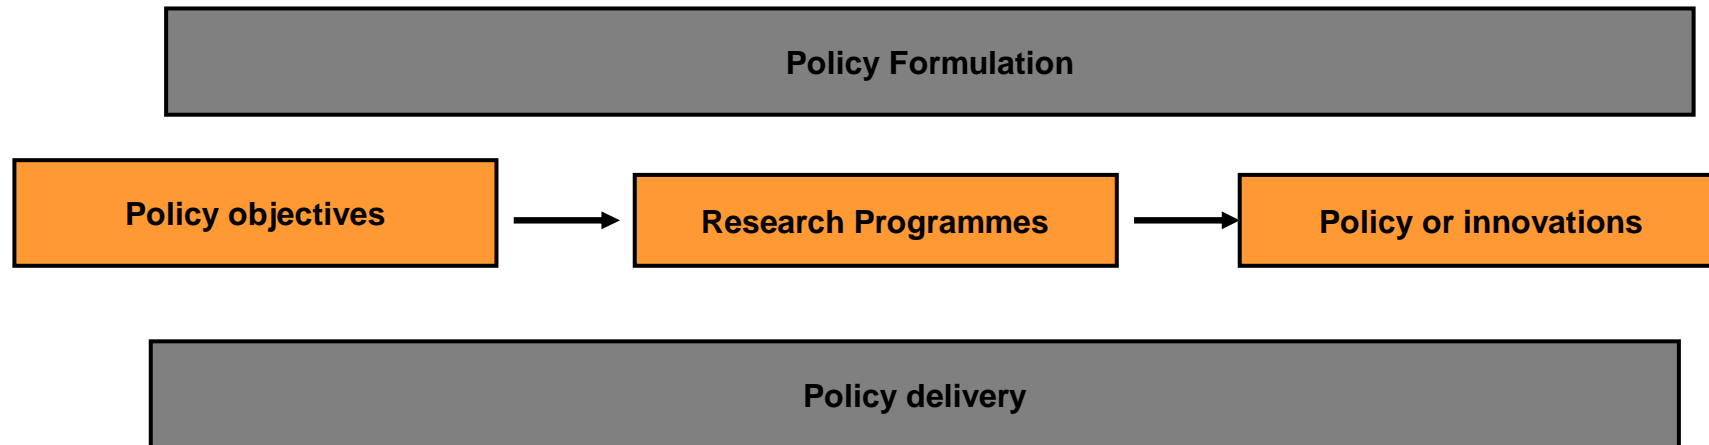

Policy making bodies have responded by investing in policy led research and...

Gone as far as tramlining research investment onto current policy objectives

Research tramlined onto policy (user) needs is plausible, but.....

Scientists deliver knowledge and understanding, not policy or innovation outcomes.

Fragmentation of the science base.

Duplication of research effort – differing policy areas have overlapping research needs.

Fragmentation of effort leading to inaccessible and unusable outputs.

Instable investment – the flap of a butterfly’s wing in policy can cause a storm in the research community.

Late delivery – research follows policy, policy has moved on.

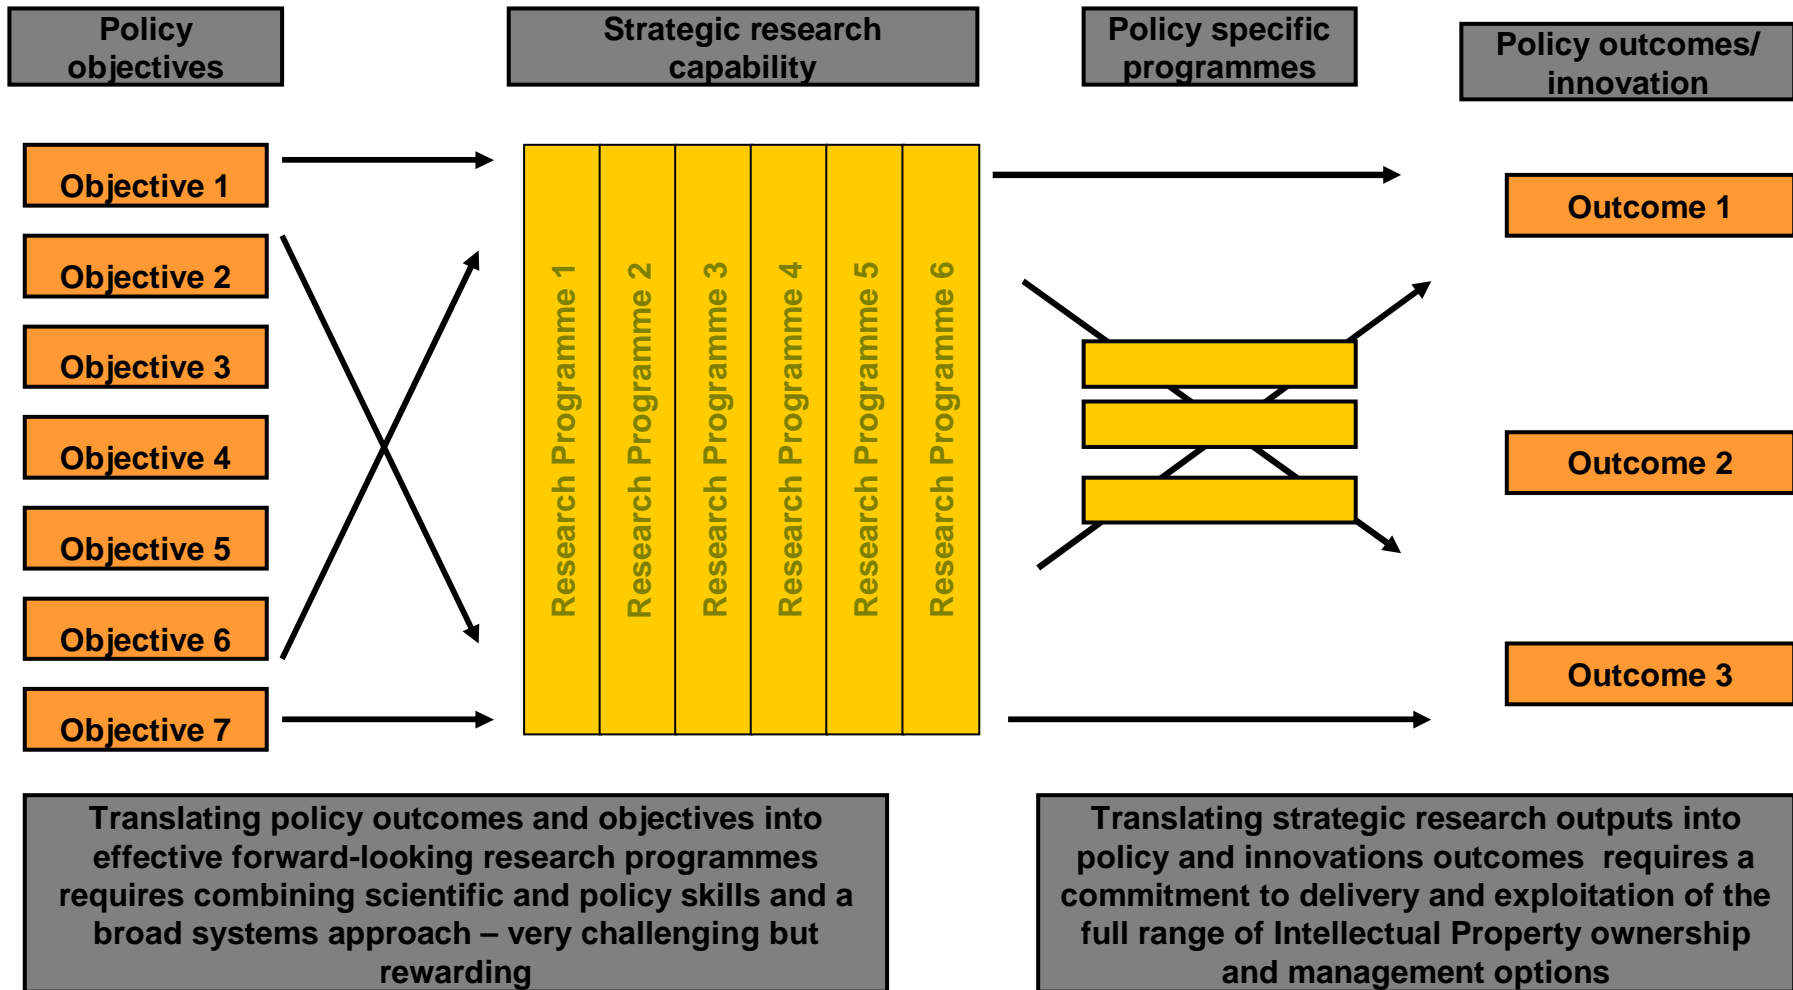

There is a huge difference between policy led and policy driven research – policy organisations can drive strategic research but may struggle to lead strategic research

So....

Murphy-Bokern

Konzepte

**Policy outcomes need to be articulated into robust coherent strategic research capability and
 Strategic research outputs need to be articulated into policy outcomes and innovation**

‘Intelligent decoupling’

Murphy-Bokern
Konzepte

**Delivering a return on public investment in research:
Leading technical change and innovation**

**Traditional emphasis on telling users of research outputs
what to do –e.g. in agricultural extension:**

‘getting the message across’

‘knowledge transfer’

‘changing behavior’

**In other words – doing things to passive research users -
this is patronising and disempowering**

Delivering a return on public investment in research

Understanding empowers

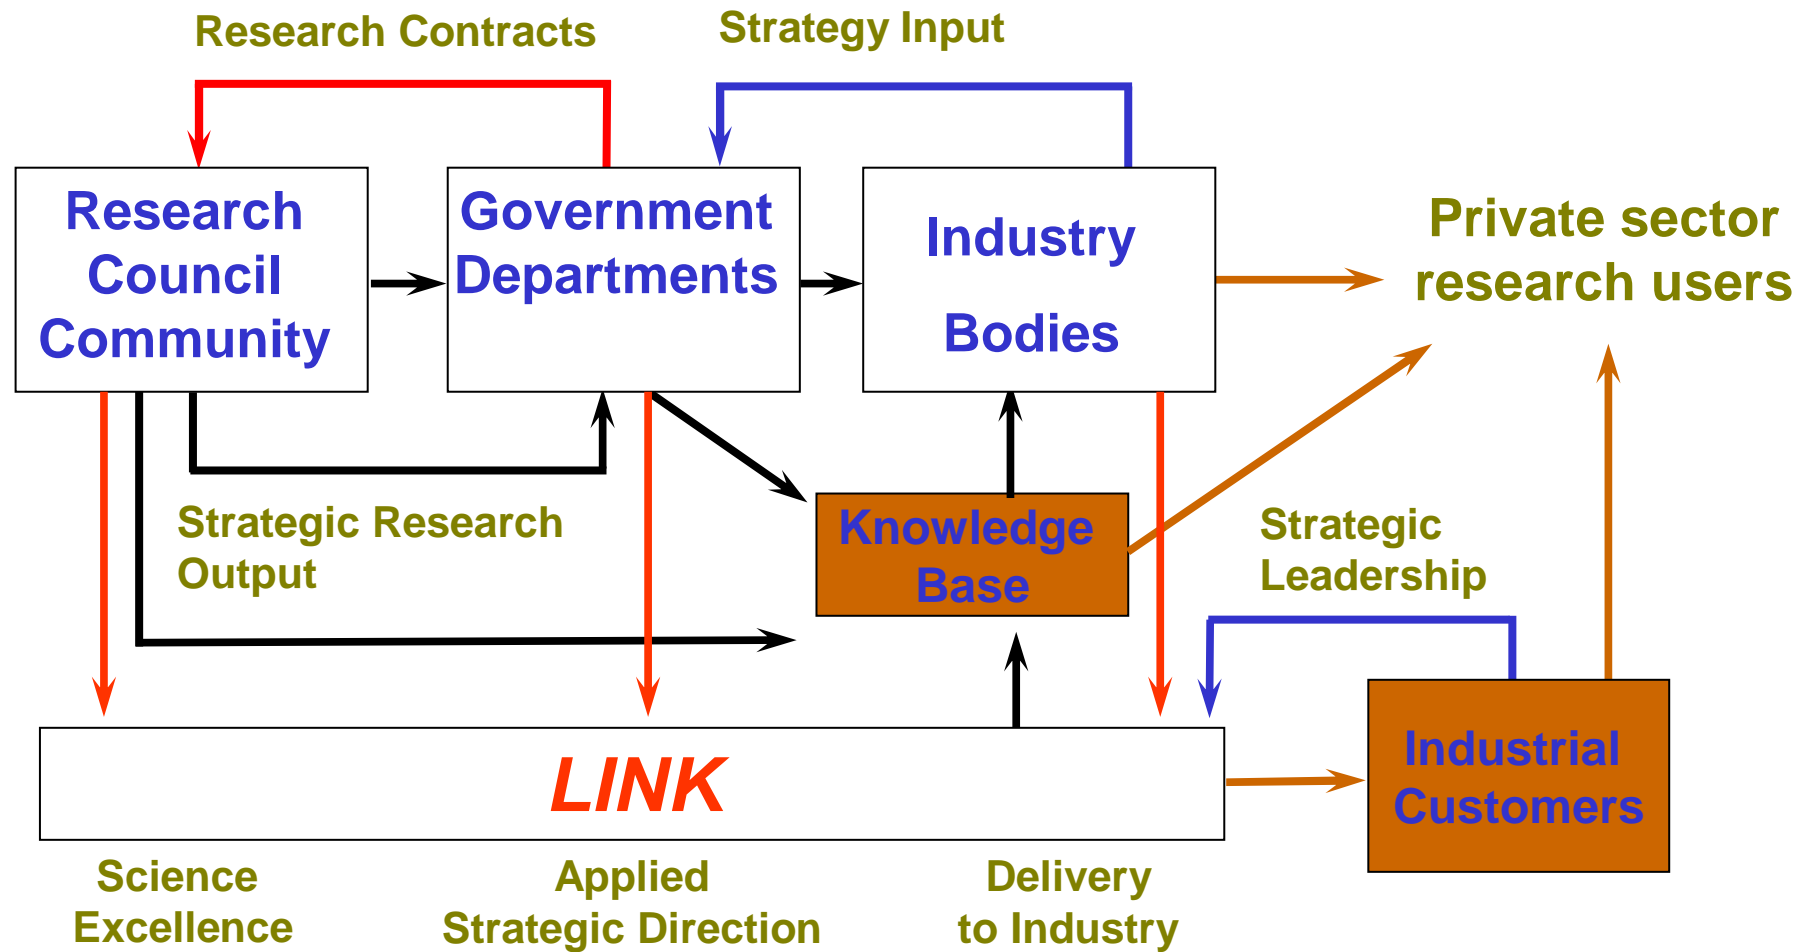

Provide access to knowledge – knowledge access

Foster knowledge acquisition

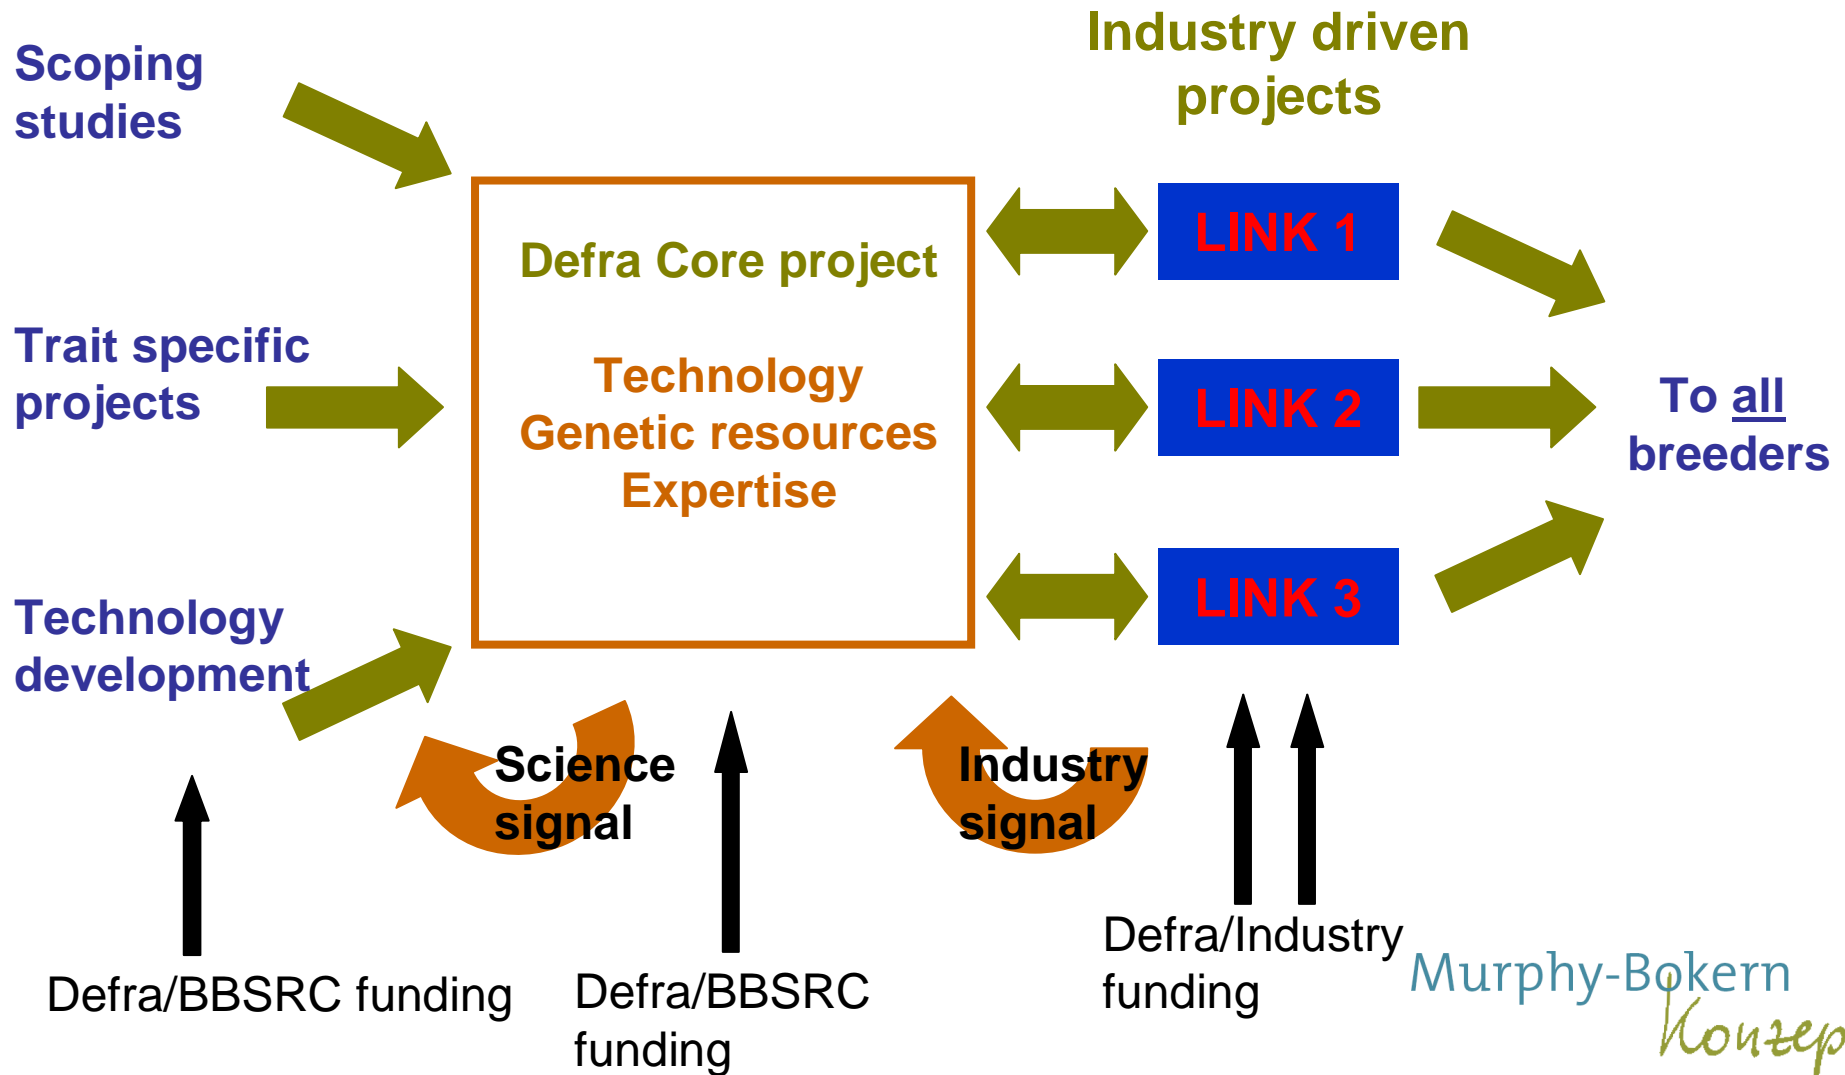

Be realistic about the commercial value of IP

Bundle research outputs into usable technologies – e.g. seeds and decision support systems

Embedding research users into research programmes –
e.g. LINK in the UK

Embedding delivery partners into research programmes –
The Defra Crop Genetic Improvement Networks
'a functioning system of supply and demand'

The Carbon Trust's approach to technology innovation addresses 4 necessary journeys

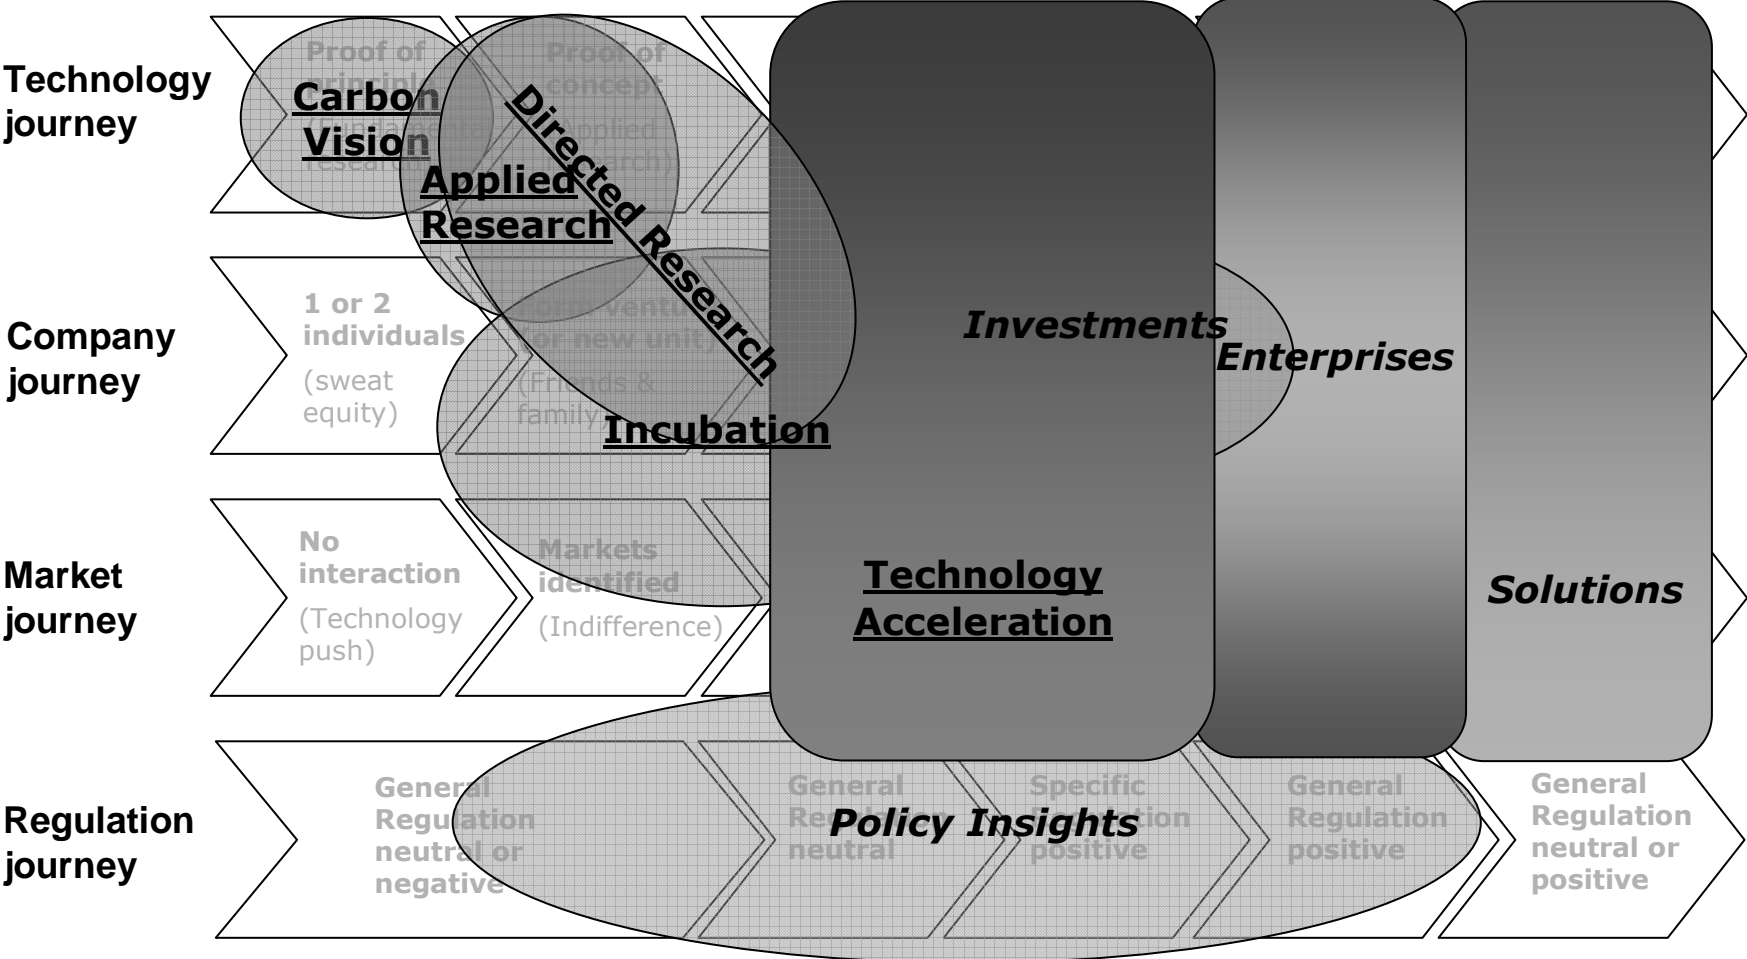

Delivering a return on public investment in research: The Carbon Trust approach

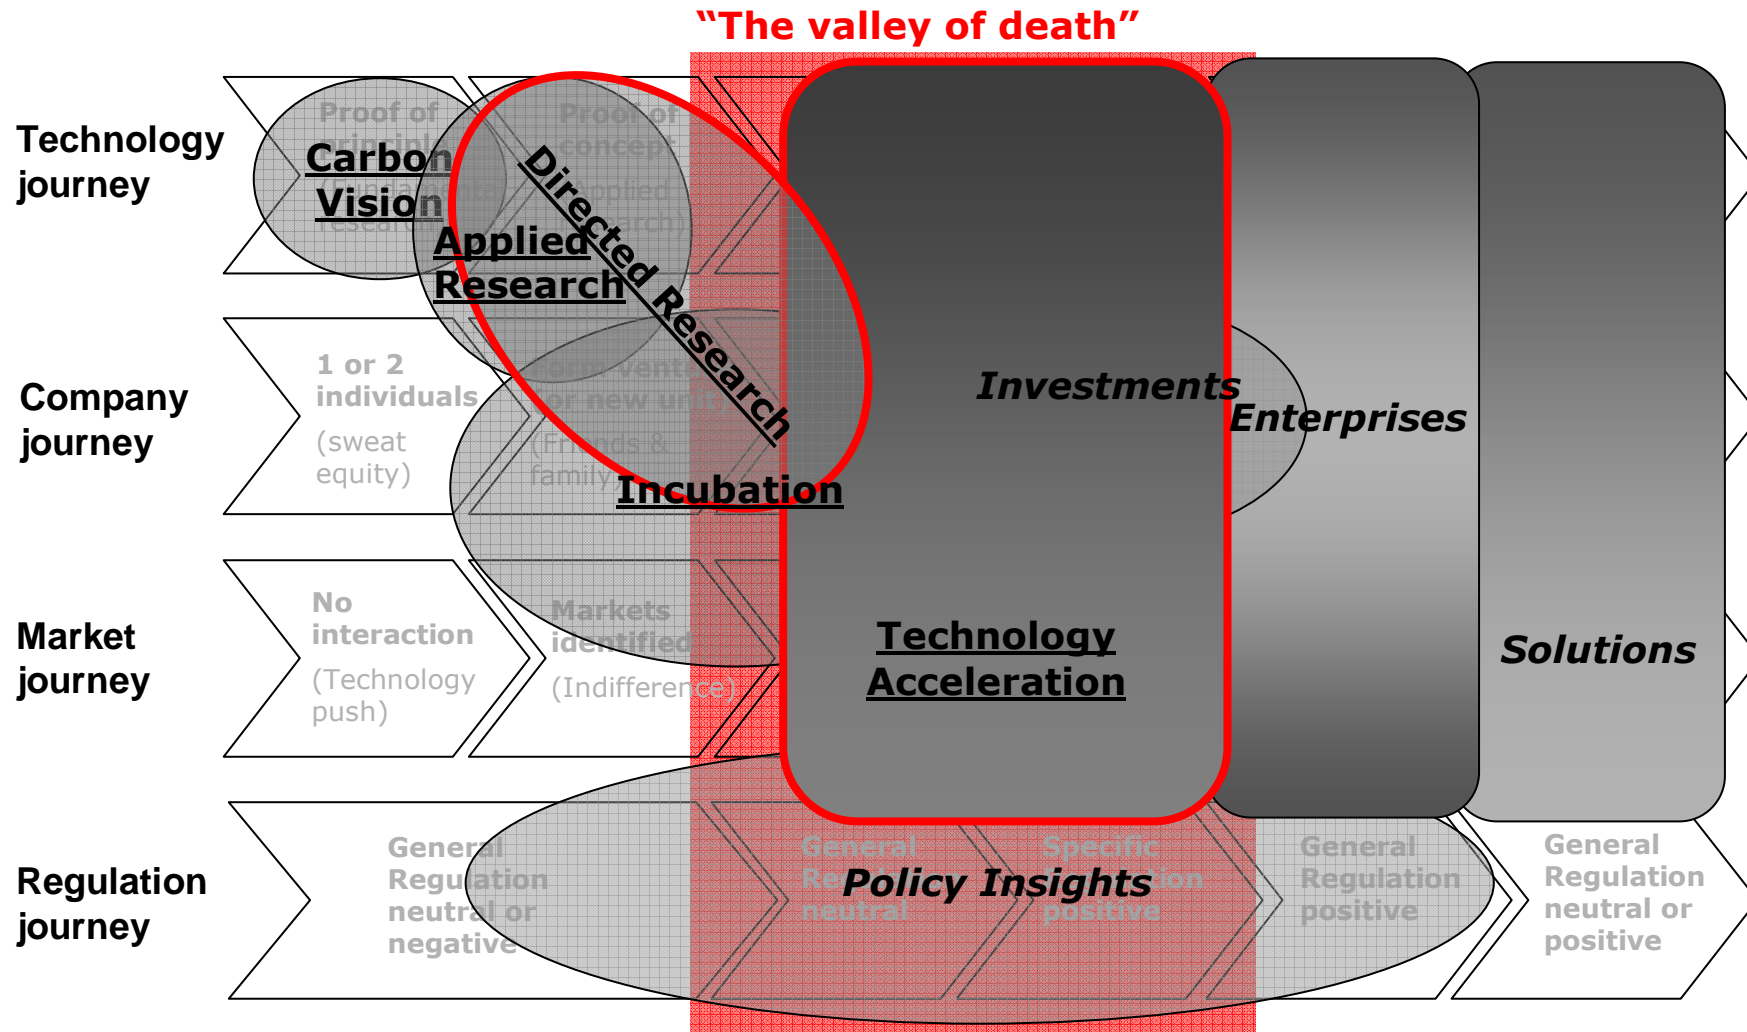

Working with the grain of capital markets

Murphy-Bokern
Konzepte

Carbon Trust Innovations

Directed Research is designed to work with existing Carbon Trust Technology Acceleration programme to bridge the “valley of death”

From research results to policy outcomes

- Invest coherently in clear research targets and capability
- Balance science led and policy driven research
- Assess market failure realistically – additive public investment
- Invest in appropriate near-market research
- Translate policy outcomes into research targets
- Embed delivery into the research

From research results to policy outcomes

- Foster system understanding to enhance transferability of research
- Provide access to research outputs – free research data and information are the oxygen of the translation process – free web publishing
- Foster active knowledge acquisition
- Value IP realistically – aggressive IP policies damage delivery
- Commercialisation and widespread exploitation of IP are not the same
- See the research investment through to the delivery of usable knowledge and technology
- Foster equality of esteem for fundamental, strategic and applied research, and research delivery.
